

Most Common Causes of Death Due to Injury in the US

The most common causes of death due to injury in the United States

The table is derived from the National Safety Council's data on accidents. There are four columns:

Column 1: Manner of injury

Column 2: Total number of deaths nationwide due to the manner of injury for the year 2000

Column 3: Odds of dying in one year due to the manner of injury [i.e. 1 in 46,901 chance of dying as a Pedestrian]

Column 4: Odds of dying over the course of a lifetime due to the manner of injury [i.e. 1 in 610 chance of dying as a Pedestrian]

Source: National Safety Council "estimates based on data from National Center for Health Statistics and U.S. Census Bureau. Deaths are classified on the basis of the Tenth Revision of the World Health Organization's "The International Classification of Diseases" (ICD). Numbers following titles refer to External Cause of Morbidity and Mortality classifications in ICD-10. One year odds are approximated by dividing the 2000 population (275,306,000) by the number of deaths. Lifetime odds are approximated by dividing the one-year odds by the life expectancy of a person born in 2000 (76.9 years)."
